

Your AI-Powered Weather & Wardrobe Assistant

"Know the weather, wear it right!"

Weather Intelligence | Fashion Technology | Conversational AI

? The Problem

- **50% of people** check weather but still dress inappropriately
- Weather apps overwhelm users with **too much data**
- No one tells you: *"Should I carry an umbrella?"* or *"Is it too cold for shorts?"*
- Decision fatigue every morning: **What should I wear today?**

The Gap: Weather data exists, but *actionable fashion advice* doesn't.

The Solution: WeatherBot

A conversational AI that bridges weather & wardrobe

- **Natural Conversations:** Ask in plain English
- **Smart Summaries:** Rain? Snow? Sunny? — Instant answers
- **Outfit Recommendations:** Personalized clothing advice
- **Specific Metrics:** Humidity, UV, wind on demand

How It Works

***Outfit Logic:** Rule-based system analyzing temp + conditions:

- Rain/snow → waterproof gear
- Temp bands (°C) → clothing layers
- UV index → sunscreen advice

⚡ < 2s | 🎯 100% accuracy

WeatherBot = Weather API + Rasa AI + Fashion Logic

Market / Business Opportunity

Market Size

Weather Apps: \$2.3B (2024)

Fashion Tech: \$3.8B (12% growth)

Target Audience (MVS)

- **Urban Professionals** — Morning decisions
- **Travelers** — Packing advice
- **Parents** — Dressing kids
- **Outdoor Enthusiasts** — Gear advice

Competitive Edge

Feature	Others	Us
Weather	✓	✓
Outfit Advice	✗	✓
Conversation	⚠	✓
Privacy	⚠	✓

Opportunity: 500M+ users lack **fashion guidance**

Traction

User Stories Implemented

-  Brief weather check with condition-aware responses
-  Detailed metric queries (humidity, wind, UV, pressure)
-  Direct outfit recommendations
-  Multi-turn conversations (weather → offer outfit → confirm)

Development Timeline

Week 1: Core actions & API

Week 2: Outfit logic

Week 3: Web UI & launcher

Week 4: Docker & testing

Quality Metrics (Current MVP)

100%

Story Accuracy

100%

Action Accuracy

< 2s

Response Time

3/3

Unit Tests Pass

Note: 100% = all *implemented user stories* pass validation.

Can it fail? Yes — external factors: API downtime, network issues, invalid city names.

Testing: 3 unit tests (outfit logic), Rasa data validation passes, manual QA on 20+ scenarios.

Tech Stack

Rasa 3.x

NLU + Dialogue Management

Python

Custom Actions

WeatherAPI

Real-time Weather Data

Flask + HTML/JS

Web Interface

Why This Stack?

- **Rasa**: Open-source, customizable, runs locally (data privacy)
- **WeatherAPI**: Free tier, 1M calls/mo, 100+ data points

- **Docker**: Easy deployment, platform-independent
- **Modular Design**: Swap APIs, add new actions, scale horizontally

Scalability: Docker Compose + Nginx for production; supports multiple instances

Sustainability / Ethical Issues

Data Privacy & Permissions

- **No user accounts:** Fully anonymous conversations
- **No personal data storage:** Only city names for API calls
- **Session-based:** Data cleared after conversation ends

Ethical Considerations

-  **Transparent API usage:** WeatherAPI terms compliant
-  **Offline-first option:** Runs locally (no cloud required)
 - Outfit logic is *rule-based code* (not data-driven), stored in `actions/actions.py`
 - No user data or clothing database needed on device
 - Only weather API calls require internet (can cache for offline use)
-  **Inclusive advice:** No gender/cultural assumptions in outfit suggestions
-  **Environmental impact:** Lightweight, low-compute design

Guideline: EU GDPR compliant by design (minimal data, user control)

Use Case Example 1: Quick Morning Check

 **User:** Hi!

 **WeatherBot:** Hello! I can help with weather or outfit suggestions. Just ask!

 **User:** What's the weather in London?

 **WeatherBot:** It's 12°C in London right now – rainy with light showers. 

Would you like outfit suggestions?

 **User:** Yes

 **WeatherBot:** For rainy weather at 12°C in London:

 Waterproof jacket or raincoat

 Water-resistant shoes

 Don't forget your umbrella!

Result: User ready in 30 seconds! 

Use Case Example 2: Specific Metric Query

 **User:** What's the UV index in Sydney?

 **WeatherBot:** The UV index in Sydney is currently 8.0.
Would you like outfit suggestions?

 **User:** Yes

 **WeatherBot:** For sunny weather at 28°C in Sydney:

-  Wide-brimmed hat and sunglasses
-  Light, breathable fabrics (cotton, linen)
-  High SPF sunscreen essential!

 **User:** What should I wear in Tokyo today?

 **WeatherBot:** *[Fetches weather automatically]*
For overcast weather at 15°C: Light jacket or cardigan recommended...

Future Development / Conclusion

Location Detection: Auto-detect user's city via IP/GPS

Weekly Forecasts: "Plan your outfits for the week"

Style Preferences: Learn user's fashion taste (formal/casual/sporty)

Shopping Integration: Suggest products from partner brands

Multi-language: Support 10+ languages for global reach

Mobile App: Native iOS/Android with push notifications

The Punchline

*"WeatherBot: Because knowing the weather
is only half the story — **wearing it right** is the other half."*

Thank You! 🙏
